DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by the admitted prior art (figures 8-13).

Regarding claims 1-4, 7 and 9, the admitted prior art teaches an electro-acoustic transducer that comprises a magnetic circuit (1, 2, 3, 4), a frame (6), a diaphragm (7), a voice coil (8), a terminal (10) consisting of a sheet metal having spring property and electrical conductivity, and a stopper (9, 11). As shown in figures 9, 10, 12, the stopper (9, 11) is disposed on the reverse surface of the magnetic circuit for restricting the bending of the sheet metal constituting the terminal (10) to be within the reversibility limit value of the metallic material as claimed (also see page 2, lines 1-4 in the specification).

In addition to claim 9, the admitted prior art shows an electronic apparatus (figures 11-12) that contains an electro-acoustic transducer as claimed.

Allowable Subject Matter

3. Claims 5-6 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fukuyama et al. (U.S. patent 7,200,241) teaches a speaker that comprises a spring terminal.

Fujinami et al. (U.S. patent 6,674,872) teaches a speaker that comprises a terminal member having a plate spring.
